	Polyester Leaves
	Available in Green or Variegated Green/Cream Colors
TRUNK	Natural Wood Stem: Commercial Silk International uses only the finest wood trunks from specialized harvesters in the building of our artificial trees. All of our trunks are hand selected for each artificial tree we build. By hand selecting each trunk, we are able to combine the exact shapes needed to achieve the desired look of the tree. In addition, having our main manufacturing facility located in the Midwest, provides us with access to tree varieties not elsewhere found in the United States. This provides our clients with distinctive, one-of-a-kind artificial trees.
BASE	Our standard base is a plastic grow pot. Depending on the application for the artificial tree or plant, we can build a custom steel base plate. If you would like a decorative container, we can assist you with selecting the appropriate container from one of our many manufacturers.
CAD and 3-PART SPEC FILES	Request downloadable CAD and 3-Part Specifications for inclusion in your plans. Includes drawings in elevation and plan view as well as plant details.
