SPECIFICATIONS

DESCRIPTION	216 FLOWERS, 270 BUDS
SIZE(S) SHOWN	48"
ITEM ID(S) SHOWN	AZA1B24B+
ADDITIONAL SIZES	VARIES
FOLIAGE	UV AVAILABLE Commercial Silk International's UV (Ultraviolet) artificial foliage is created through a process by which ultraviolet blocking chemicals are impregnated into the materials during the manufacturing process. These chemicals are blended with the fabric as well as the plastic or PVC parts. Our outdoor foliage have been tested for colorfastness according to ASTM G155-05, and after one year of UV exposure equivalent to Miami, Florida, our product had NO COLOR LOSS visible by sight.
	Plastic Leaves
	Available in Beauty, Cream or Pink Colors
TRUNK	Natural Wood Stem: Commercial Silk International uses only the finest wood trunks from specialized harvesters in the building of our artificial trees. All of our trunks are hand selected for each artificial tree we build. By hand selecting each trunk, we are able to combine the exact shapes needed to achieve the desired look of the tree. In addition, having our main manufacturing facility located in the Midwest, provides us with access to tree varieties not elsewhere found in the United States. This provides our clients with distinctive, one-of-a-kind artificial trees.
BASE	Our standard base is a plastic grow pot filled with concrete. Depending on the application for the artificial tree or plant, we can build a custom steel base plate. If you would like a decorative container, we can assist you with selecting the appropriate container from one of our many manufacturers.
CAD and 3-PART SPEC FILES	Request downloadable CAD and 3-Part Specifications for inclusion in your plans. Includes drawings in elevation and plan view as well as plant details.
